Your First Expert Advisor Part 1

In the previous lesson we created our first indicator. Although this indicator wasn't useful for us as trader, but it was very useful for us as programmers.

The indicators –in general- are very important for the technical analysis of the market in trying to predict the future prices.

But with the indicators we observe the chart then use our hands to sell, buy and modify our orders manually. You have to set in front of your terminal, and keep your eyes widely open.

If you get tired, want to drink a cup of tea or even take a short vacation. You have to consider one of these solutions:

You may rent someone to observe the terminal for you and calling your mobile phone every five minutes to tell you what's going on. If this employee is an expert, he will cost you the pips you earn. And if he is novice one, he will cost you your capital.

The second solution is using a program to automate your trades.
That's what the Expert Advisor is for.

The Expert advisor is a program wrote in MQL4 (we are studying MQL4 huh?) uses your favorite indicators and trade methods to automate your orders.

It can buy, sell and modify the orders for you. It enables you to drink a cup of tea and save the salary you gave out to your employee or the bunch of flowers you bring to your assistant wife.

Today we are going to create our first expert advisor so let's go.

First two steps:

Step1:

If you didn't open your MetaEditor yet, I think it's the time to run it.

From the MetaEditor File menu click **New** (you can use **CTRL+N** hotkey or click the **New** icon in the standard toolbar). That will pop up the new program wizard which you have seen when you created your first indicator (Figure 1).

This time we will choose the first option “**Expert Advisor program**” then click **Next** button.

Figure 1 – the first step wizard

Step2:

When you clicked **Next**, you have got the general properties wizard (Figure 2). This wizard enables you to set the properties of your expert advisor and to set the external variables you will use in your expert advisor.

In this step you can set these properties:

- 1- **Name** of your expert advisor, in our sample we will use **My_First_EA**.
- 2- **Author** name of the program, type your name (I typed mine in the sample).
- 3- **Link** to your web site.
- 4- **External variables list:**

This is the list of the external variables you allow the user of your expert advisor to change them from the **Expert properties** window.

To add a new variable you click the **Add** button, clicking it will add a new record to the external variables list. Every record has three fields:

Name: double click this field to set the name (identifier) of the variable.

Type: double click this field to set the data type of the variable.

Initial value: double click this field to give your variable initialization value.

This field is *optional* which means you can leave it without setting

In our sample we have added three variables:

Variable → Type → initial value

TakeProfit → double → 350

Lots → double → 0.1

TrailingStop → double → 35

Figure 2 – the second step wizard

Now click the **Finish** button to close the wizard, and MetaEditor will bring to you the code created by the wizard and saves the file **My_First_EA.mq4** in the **MetaTrader 4 \experts** path.

*Note: you have to put the expert advisors in **MetaTrader 4\experts** path and the indicators in **MetaTrader 4\experts\indicators** path, otherwise they will not work.*

This is the code we have got from the wizard:

```
//+-----+
//|                                     My_First_EA.mq4 |
//|                                     Coders Guru |
//|                                     http://www.forex-tsd.com |
//+-----+
#property copyright "Coders Guru"
#property link      "http://www.forex-tsd.com"

//---- input parameters
extern double      TakeProfit=250.0;
extern double      Lots=0.1;
extern double      TrailingStop=35.0;
//+-----+
//| expert initialization function |
//+-----+
int init()
{
//----

//----
    return(0);
}
//+-----+
//| expert deinitialization function |
//+-----+
int deinit()
{
//----

//----
    return(0);
}
//+-----+
//| expert start function |
//+-----+
int start()
{
//----

//----
    return(0);
}
//+-----+
```

As you see above, the code generated by the wizard is a template for you to add your code without bothering you by typing the main functions from scratch.

Now let's add our own code:

```
//+-----+
//|                                     My_First_EA.mq4 |
```

```

int cnt, ticket, total;
double shortEma, longEma;

if(Bars<100)
{
    Print("bars less than 100");
    return(0);
}
if(TakeProfit<10)
{
    Print("TakeProfit less than 10");
    return(0); // check TakeProfit
}

shortEma = iMA(NULL,0,8,0,MODE_EMA,PRICE_CLOSE,0);
longEma = iMA(NULL,0,13,0,MODE_EMA,PRICE_CLOSE,0);

int isCrossed = Crossed (shortEma,longEma);

total = OrdersTotal();
if(total < 1)
{
    if(isCrossed == 1)
    {
        ticket=OrderSend(Symbol(),OP_BUY,Lots,Ask,3,0,Ask+TakeProfit*Point,
        "My EA",12345,0,Green);
        if(ticket>0)
        {
            if(OrderSelect(ticket,SELECT_BY_TICKET,MODE_TRADES))
            Print("BUY order opened : ",OrderOpenPrice());
        }
        else Print("Error opening BUY order : ",GetLastError());
        return(0);
    }
    if(isCrossed == 2)
    {
        ticket=OrderSend(Symbol(),OP_SELL,Lots,Bid,3,0,
        Bid-TakeProfit*Point,"My EA",12345,0,Red);
        if(ticket>0)
        {
            if(OrderSelect(ticket,SELECT_BY_TICKET,MODE_TRADES))
            Print("SELL order opened : ",OrderOpenPrice());
        }
        else Print("Error opening SELL order : ",GetLastError());
        return(0);
    }
    return(0);
}
for(cnt=0;cnt<total;cnt++)
{
    OrderSelect(cnt, SELECT_BY_POS, MODE_TRADES);
}

```

```

    if(OrderType()<=OP_SELL && OrderSymbol()==Symbol())
    {
        if(OrderType()==OP_BUY) // long position is opened
        {
            // should it be closed?
            if(isCrossed == 2)
            {
                OrderClose(OrderTicket(),OrderLots(),Bid,3,Violet);
// close position
                return(0); // exit
            }
            // check for trailing stop
            if(TrailingStop>0)
            {
                if(Bid-OrderOpenPrice()>Point*TrailingStop)
                {
                    if(OrderStopLoss()<Bid-Point*TrailingStop)
                    {
                        OrderModify(OrderTicket(),OrderOpenPrice(),Bid-
Point*TrailingStop,OrderTakeProfit(),0,Green);
                        return(0);
                    }
                }
            }
        }
        else // go to short position
        {
            // should it be closed?
            if(isCrossed == 1)
            {
                OrderClose(OrderTicket(),OrderLots(),Ask,3,Violet);
// close position
                return(0); // exit
            }
            // check for trailing stop
            if(TrailingStop>0)
            {
                if((OrderOpenPrice()-Ask)>(Point*TrailingStop))
                {
                    if((OrderStopLoss()>(Ask+Point*TrailingStop)) ||
(OrderStopLoss()==0))
                    {
                        OrderModify(OrderTicket(),OrderOpenPrice(),Ask+Point*TrailingStop,
OrderTakeProfit(),0,Red);
                        return(0);
                    }
                }
            }
        }
    }
    return(0);
}
//+-----+

```

*Note: don't copy and paste the code above because it **warped** and will not work for you, use the code provided with lesson in www.forex-tsd.com .*

Scared?

Don't be scared of the 160 lines you have seen above, we will know everything about this code line by line, I promise it's an easy task.

Test the Expert Advisor:

Before studying our expert advisor code we have to be check is it profitable one or not.

*Note: Our expert advisor will work with **EURUSD** pairs in **4 Hours** timeframe. So compile the expert advisor by pressing **F5** and load it in MetaTrader.*

You can test your expert advisor using two methods:

1- Live trading

In live trading testing the results are more accurate but you have to spend days (and maybe months) to know is the expert advisor profitable or not.

You have to enable the expert advisor to automate your trades.

To enable it click **Tools** → **Option** menu (or use **CTRL+O** hotkey), that's will bring the **Options** windows (figure 3), click **Expert Advisors** tab and enable these options:

Enable Expert Advisors
Allow live trading

And click Ok button

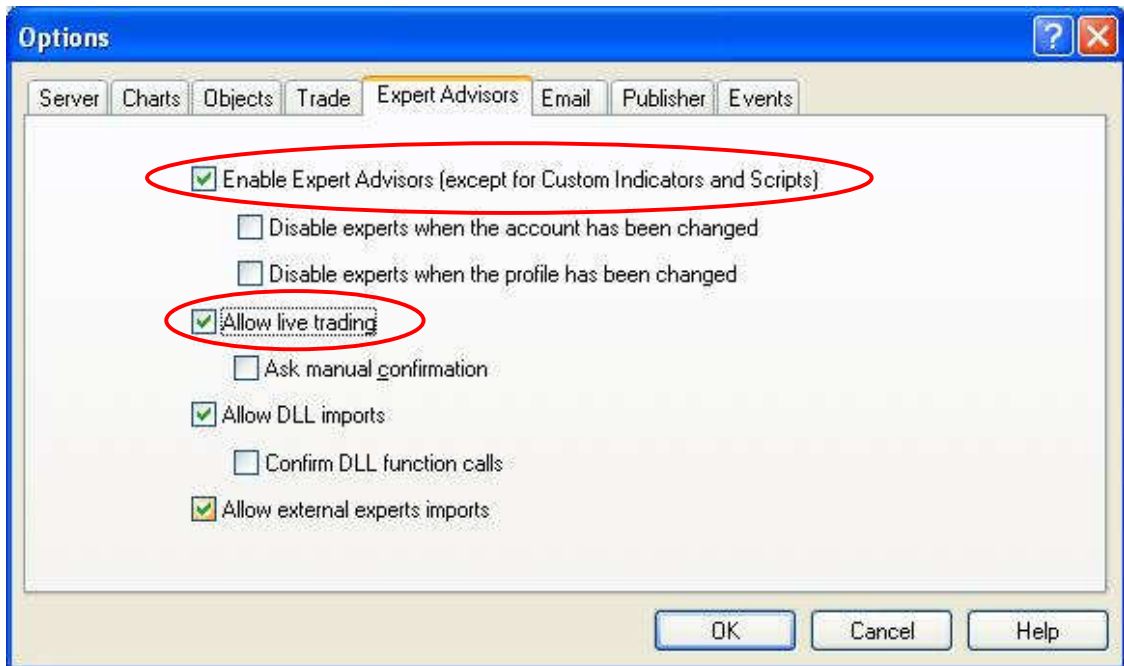

Figure 3 – Enabling expert advisor auto trade

You will see the **Smile** symbol beside the expert advisor name which means your expert advisor is working and ready to trade for you (Figure 4).

Figure 4 – Expert advisor is enabled

2- Strategy Tester:

The second method of testing your expert advisor which is less accurate but will not take time is the Strategy tester. We will know everything about Strategy tester later, let's now bring its window by pressing **F6** (Figure 5).

When you get the window enter these options:

Symbol: EURUSD.

Period: H4 (4 Hours).

Model: Open price only.

Figure 5 – Strategy tester window

Now click **Start** button to start testing the expert advisor.

You will see a progress bar and the two tabs (Settings and Journal) became five tabs. We interested in **Report** tab (Figure 6); click it to see your profit.

Bars in test	696	Ticks modelled	1292	Modelling quality	n/a
Initial deposit	10000.00				
Total net profit	352.80	Gross profit	1025.50	Gross loss	-672.70
Profit factor	1.52	Expected payoff	13.07		
Absolute drawdown	26.00	Maximal drawdown (%)	349.20 (3.3...		
Total trades	27	Short positions (won %)	8 (87.50%)	Long positions (won %)	19 (42.11%)
		Profit trades (% of total)	15 (55.56%)	Loss trades (% of total)	12 (44.44%)
	Largest	profit trade	249.30	loss trade	-92.70

We have a lot to say and to do in the next lesson; I hope you are ready for the challenge. I welcome very much the questions and the suggestions.

See you
Coders' Guru
